

## Osteomin

### Breeding Feed

### Mineral supplement for horses

For stability and function of the skeleton, we have mixed balanced levels of calcium and phosphorus in Osteomin to meet the needs of growing horses. To stabilise the connective tissue, to optimise ossification, and to support the metabolism of carbohydrates, proteins and minerals, we have added copper, zinc and manganese in the form of easily digestible organically bound chelates. To ensure steady and consistent growth, the essential amino acids lysine and methionine are also included.
