

## Peanuts chopped

### Feed Material

In fall and winter, the chopped peanuts provide the birds with the energy they need to survive the cold months. In spring and summer, they help hawfinches and mixed feeders in particular to breed and rear their young. This protein-rich feed is a delicacy for all native garden and wild birds. It can be offered at feeding silos, bowls or bird feeders and the birds will always be happy to come back to your garden so you can watch the birds at your leisure. It is important that the peanuts are absolutely fresh and not roasted, because only then are they digestible and the birds like them best, so that they are eaten nut by nut.

### Recommended feeding:

Our chopped peanuts are suitable for year-round feeding! If you offer the food in bird houses or feeders, clean them regularly with hot water. In this way you minimize the transmission and spread of pathogens. Make sure that the feed cannot get soaked even in strong winds, snow and rain, otherwise it will spoil or freeze and the birds will no longer eat it.

Did you know that robins, yellowhammers, dunnocks and blackbirds are so-called ground feeders? They don't like to go to the feeder, but like to pick up the seeds from the ground. If you have space in your garden, provide a ground feeder. Simply fill a wooden or plastic bowl with food and place it on the ground.

If you offer feed, please also provide drinking water for the birds. Especially in winter, when natural water sources such as puddles or water in gutters are frozen, birds also need an extra bowl of water. However, there is no need for an expensive bird bath at the bird feeder; a flower pot saucer or an old soup plate are perfect as a watering place. The water should be changed regularly.

**Composition:** 100,0 % Peanuts

**Analytical constituents and levels:** 30,20 % Crude protein, 49,40 % Raw fat, 11,40 % Crude fibre
