

EMH Mite-Stop

Concentrate

Stable cleaner with effective organisms

Our EMH Mite-Stop ensures clean air in the coop. Its effective organisms help to eliminate negative microbes and have a positive impact on the microbial environment in the coop. Odours and ammonia gases are effectively reduced, and so too is the mite infestation. When used regularly, EMH® Mite-Stop improves the animals' resistance to parasites. Stubborn dirt on the coop walls, feed troughs and water dispensers can be removed more quickly. The use of EMH® Mite-Stop improves the chickens' well-being in the long term, as it suppresses disease-causing bacteria - the mites do not have a chance.

Recommended feeding:

Pour one part EMH® Mite-Stop into a suitable spray bottle and add 4 parts water. Regularly spray the manger, water dispenser, coop walls and bedding with the solution.

After mucking out, spray the floor of the coop where dung and urine collect.
