

Milk Thistle Oil

Feed Material

Cold pressed natural thistle oil

In equine nutrition, vegetable oils are used mainly as a source of energy, to eliminate dust, to promote a glossy coat, or for therapeutic reasons. Contained in the thistle seeds is an oil which has the highest level of essential polyunsaturated fatty acids of all oil-producing plants. Those draw less oxygen from the blood than saturated fatty acids and fill the empty glycogen deposits better than any other source of energy. As a very mobile and easily available source of energy, they promote growth and fertility and strengthen the immune system. The levels of vitamins, pre-vitamins and minerals make Milk Thistle Oil a valuable and natural supply of vital biological agents.

Recommended feeding:

Feeding recommendation:

50 - 150 ml per day depending on requirements & weight of the horse, fed with the crib feed

First results can be noticed after approx. 10 days, which will intensify with time.

Composition: 100 % Milk thistle oil
